

The future of
hosted telephony

With an array of market leading features, the Evonex hosted telephony solution from SCG will give your business the competitive communications edge in today's demanding business world.

Flexible, cost effective business communications

Evonex hosted telephony is the ideal solution for businesses of all sizes. Staff efficiency is improved with easy-to-use features and built-in Business Continuity ensures that, whatever the situation, you will never miss a call.

Switching couldn't be easier.

We have over 50 years' experience in the communications market with highly professional and experienced teams that deliver first class support and advice throughout the selection, installation and support of your new hosted system. Evonex is perfect for all sizes of business from single sites, to multi-site corporate requirements and of course in any environment home workers benefit from the full suite of functionality as though they were in the office. Evonex brings all your staff together on a single communications platform with easy to use Directories, Group Voicemails, Fax to Email, Instant Messaging and Presence.

- ✓ Intuitive user portal and call features at your finger tips
- ✓ HD voice and video capability
- ✓ Full compatibility with leading handsets
- ✓ Flexibility to use an approved range of popular hosted handsets
- ✓ One license allows multiple device registrations - Deskphone, Desktop Soft Client, Mobile client and Microsoft Teams
- ✓ Hot Desking and Call Park features
- ✓ Conference - 3 party ad hoc and conference bridge
- ✓ Address books see who is calling and Click-2-Dial straight from your contacts
- ✓ Reception Console with night service override and Drag and Drop for easy call transfer
- ✓ Functionality that is equivalent to, if not superior than, the leading on premise IP systems

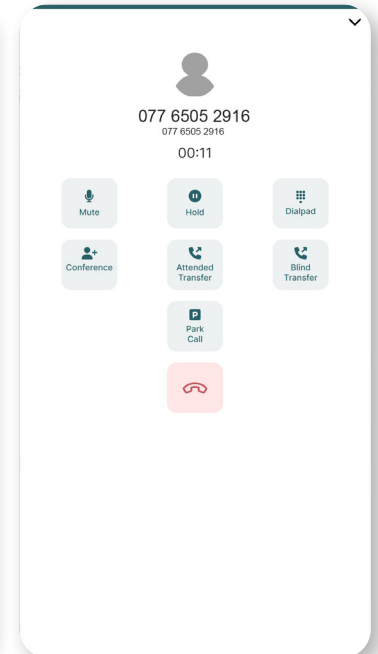

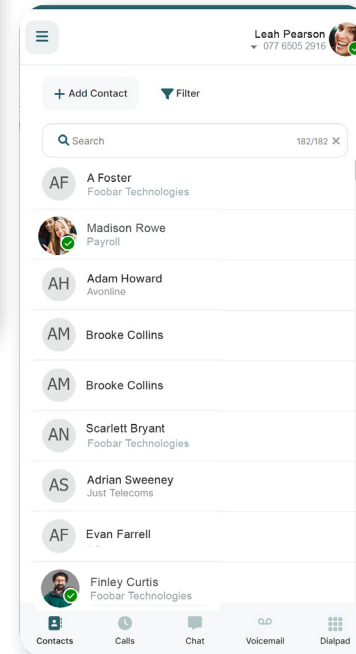

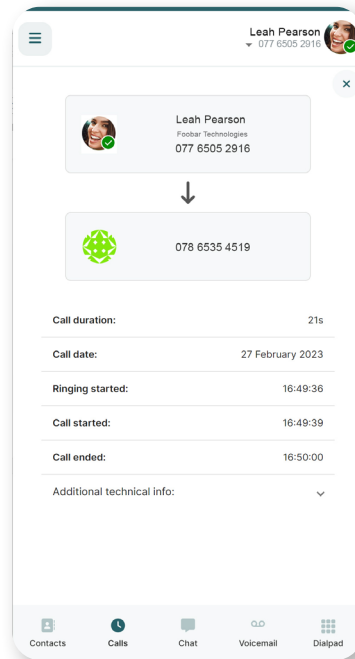

Features & Applications

The Evonex platform is a future proof, feature rich, fully supported hosted telephony solution built on highly resilient, patented, super reliable technology that is easy to use and manage. It has a range of market leading applications designed to make your everyday communications experience highly effective in the fast moving world of business.

Evonex Connect

- Works on Windows, MacOS, iOS, Android and any modern web browser
- Intuitive and clean user interface, maintaining cross-platform familiarity
- Includes all the features and functions you have come to expect:
 - Call Hold, Transfer & Park
 - Enhanced Presence
 - Contacts - internal directory, shared company & personal
 - Call History (made, received & missed)
 - Chat - one to one and groups
 - Voicemails - **including message transcription**

Features & Applications

The screenshot shows the 'Call History' interface in the UniClient application. On the left is a sidebar with navigation options: Profile, Contacts, Call History, Chat, Voicemail, and Dialpad. The main area is titled 'Call History' and has tabs for 'Missed', 'Made', and 'Received'. A search bar is present. A list of call records is shown, including phone numbers and times. A call record for 07977261420 is selected, showing a detailed view with call duration (2s), date (28 February 2023), and other technical details. A green call button is overlaid at the bottom.

UniClient - Call History

The screenshot shows the 'Voicemail' interface in the UniClient application. The sidebar is the same as in the Call History view. The main area is titled 'Voicemail' and has tabs for 'New', 'Old', and 'All'. A list of voicemail messages is shown, including the number 078 4094 4786 and duration (20s). A voicemail message is selected, showing a play button and a progress bar. Below the play button, the called name (Leah Pearson), number (077 6505 2916), date (28 February 2023), time (14:09:39), and duration (20s) are listed. A transcription is also visible, starting with 'Hello Ms Pearson this is Bob Jeffries...'. A green call button is overlaid at the bottom.

UniClient - Voicemails

The screenshot shows the 'Chat' interface in the UniClient application. The sidebar is the same as in the previous views. The main area is titled 'Chat' and has a 'New' button. A list of chat conversations is shown, including 'Finley Curtis, Madison Rowe', 'Madison Rowe Payroll', and 'Finley Curtis Foobar Technologies'. A chat conversation with 'Finley Curtis, Madison Rowe' is selected, showing a message history with a 'Send' button at the bottom. A green call button is overlaid at the bottom.

UniClient - Chat Screen

Features & Applications

Call Recording

Choose what to record; all calls, percentage of calls, inbound / outbound. Flexible storage options available for calls, with MiFID II compatibility (auditable records of call recordings are kept online). Authorised administrators can search, playback, download and delete.

Hunt Groups & Call Queue Management

Automatically schedule time-based routing plans and personalised messages. Manage up to 50 queues, edit queue durations and volumes, manage what happens next and enable manual override for system administrators to move calls up, down and out of queues.

Manual Night Mode Toggle

Night mode is a simple way to enable and disable an out of service mode for your phones. It will suit those that are used to traditional or on-premises systems and anyone who wants to avoid the complexity of time, day and date routing. Easily set up a button on any phone to activate or deactivate the feature. Tap the button, it illuminates red when night mode is on and green when off and a system announcement provides audible confirmation.

Click to Call & CRM Integration

Improve efficiency with screen pops and click to call. Evonex is designed to plug straight into the leading CRM systems and business applications.

Call Management

Manage your calls with the easy to use desktop application which shows your phone activity for the day, so you can always see what calls you need to return, what voicemails you need to listen to and what Instant Messages and alerts you need to respond to.

Time-Based Routing

Time-based Routing is a feature that allows Administrators to configure the call routing of individual phones around the opening hours of their business. This means that calls can be routed a certain way during office hours, another way during lunch hours and yet another way out of hours. A company can define multiple sets of office hours (we call these "schedules") which means different schedules can apply to different numbers. It's also possible to include date exceptions for public holidays, for example.

Business Continuity

Ensure you still get calls even when your connection is down with a failover number activated via the portal, using any device with an internet connection or using a standard telephone connection and PIN.

Reception Console

Drag and Drop makes it easy to transfer calls to users, groups or directly into a conference and eliminates the need for extensive user training. Agents can monitor call queues, prioritise important callers and override night service.

Manage Contacts

Manage personal and company address books, access call history; inbound, outbound and missed calls and save time with click to call.

Presence & IM

The desktop application provides presence as standard and enables you to add contacts, speed dial numbers and make, answer, transfer, park and hang up calls with ease.

Monitor, Whisper & Barge

Allows Customer Administrators access to Monitor, Whisper & Barge within a specific set group of users.

Lockdown Solution

Organisations have a responsibility for the safety of those on their premises. As events requiring a lockdown are becoming more widespread, such as security threats or other incidents, a robust solution is necessary.

We can provide a Security & Lockdown Alarm feature that is built in as standard and free to use. It enables you to broadcast unique visual alarms and distinct audio alerts to devices across your premises, which is especially useful in schools (in line with Ofsted and school emergency planning), healthcare facilities and public buildings.

This also pairs with our in-built paging system that allows users to broadcast messages to all phones in the organisation. This is a great tool for sending out information or emergency alerts, all delivered through handset speakers. This can be achieved in a number of different ways, including paging specific groups of extensions, or organisation wide.

Monitor

Silently oversee conversations ensuring professional quality of customer service and support are adhered to. No audible sound would alert the agent or the customer that the conversation is being monitored.

Whisper

Provide information and guidance privately to assist new or inexperienced personnel in a live environment. When the whisper feature is activated, the supervisor can begin speaking to the agent. This is one-directional audio from supervisor to agent. The customer will not hear the whisper. Both supervisor and agent can hear the customer.

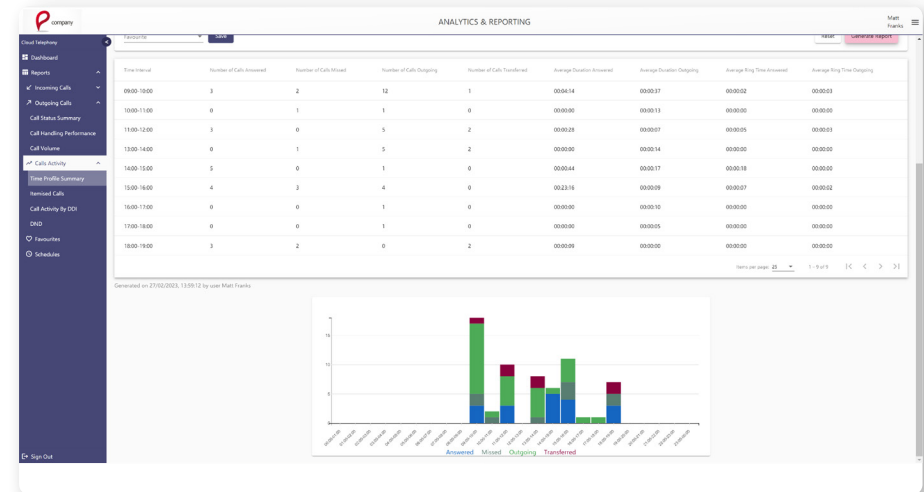

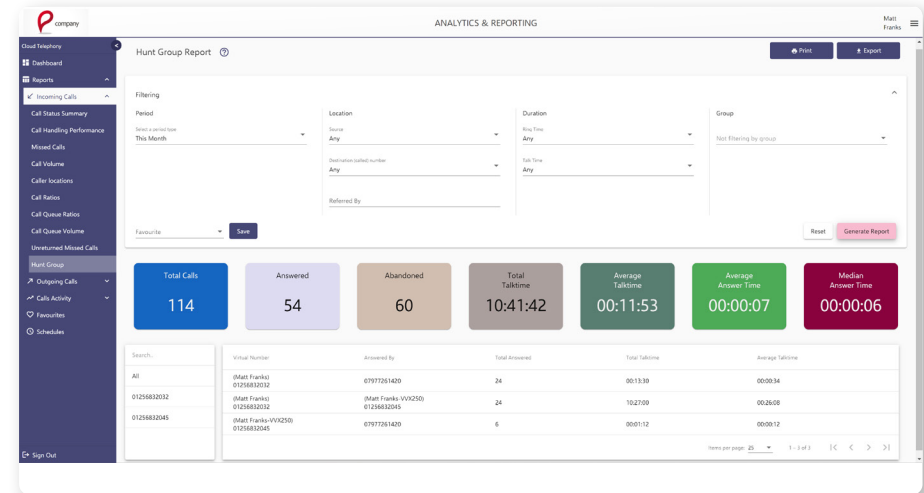

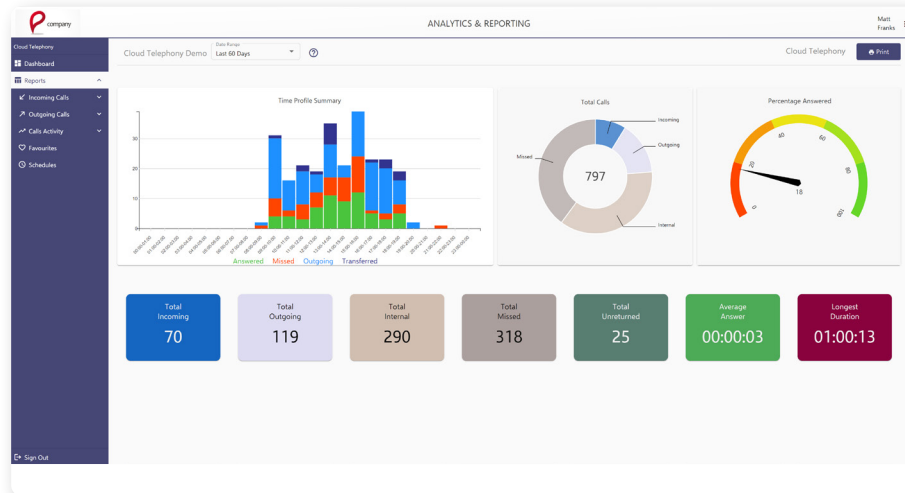

Barge

Enter directly into conversations where appropriate to take control of events potentially being handled sub-optimally. A supervisor who is silently monitoring / whispering joins the call which becomes a full three-way conference call, where all three parties can hear each other.

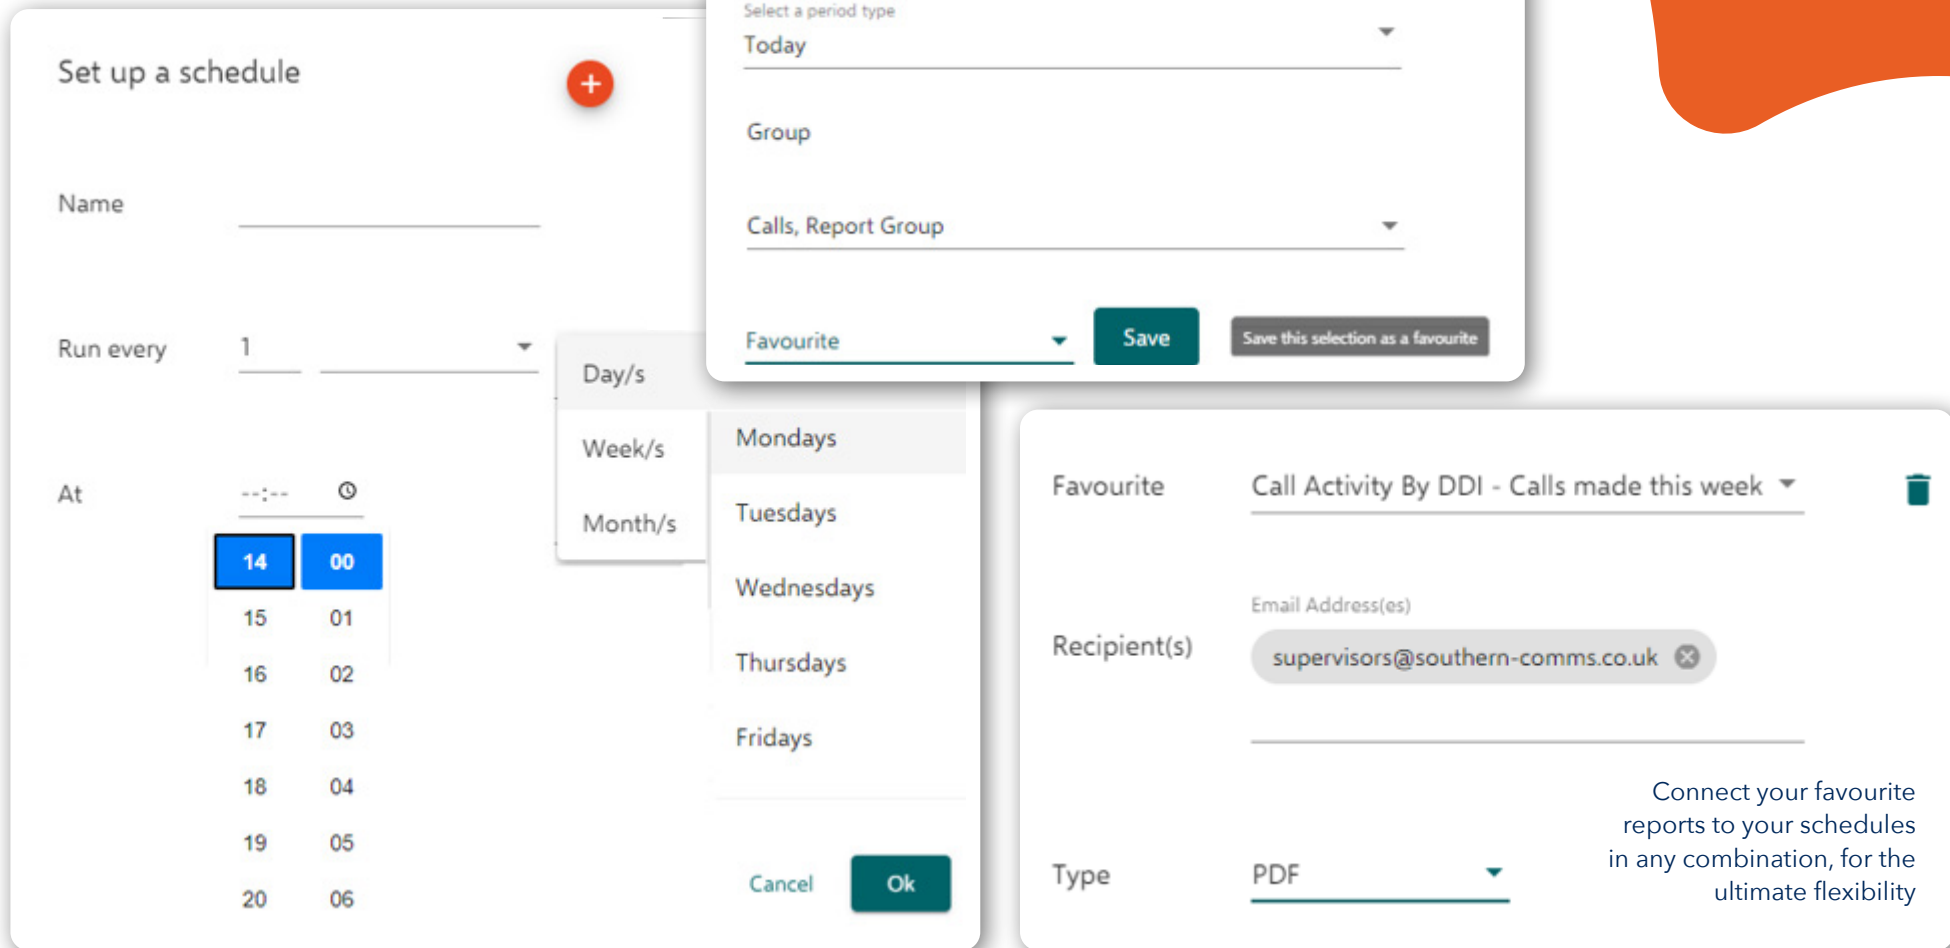

Insights

Insights is our inbuilt reporting suite which provides you with free of charge, in-depth management information. It allows manual export of reports to CSV or PDF and scheduled delivery of reports to your email with attachments.

Insights - Scheduling detail

Set up a schedule to define when the reports are emailed to you - you can create multiple schedules

Seamless Microsoft Teams integration

Evonex enables you to deliver a phone system that integrates with the Microsoft Teams environment whilst keeping all its handy telephony features.

Collaboration is key and the Evonex Teams Voice Licence, enables you to connect your telephony platform with your Microsoft Teams environment, smoothly and efficiently.

An easy-to-use management tool enables you to benefit from the features of telephony integrated into your MS Teams environment, increasing efficiency with a single platform for collaboration and calls.

Simplicity and ease of integration

SCG manage the integration for you and you retention all your existing numbers.

Functionality

World-class collaboration features offered by Microsoft Teams, bolted onto the full PBX functionality from Evonex, enriches the user experience, offering telephony features, Insights reporting and the ability to fully record calls.

MS Teams and SCG.
Best of both worlds.

Resilience

Bespoke dynamic failover for managed devices means that if Teams is unavailable, you can still use your full telephony communication platform. All of your routing can be done via the platform giving your business a full uptime scenario and independent self managed diverts at user level.

Our commitment to service & support

SCG are committed to delivering the highest level of service to our customers.

Support

We support you all the way. Our dedicated Technical Support Team provide a fast, friendly and accurate service for all our customers.

- ✓ Comprehensive setup and configuration guides covering all aspects of the platform
- ✓ A focus on continuous improvement and development
- ✓ A dedication to listening and responding to customers' needs
- ✓ Pride in offering intelligent and responsive support

We're here to support you whenever you need us. Our dedicated Technical Team provides a fast and friendly service for all our customers.

Qualified Professionals

Our staff are fully trained in Evonex through regular courses to become certified in the sales, provisioning and installation of Evonex.

Ease of use

A library of collateral and videos are available to help train users and demonstrate features to new users.

Installed, Configured and Managed

SCG will ensure your system is configured to meet the requirements of your business including helping with setting up and training on using scheduling and DDI routing, Auto Attendants and queuing, call barring and fraud prevention.
